Project Name	Automated Network Request Management
Maximum Marks	2 Marks

Proposed Solution

The **Automated Network Request Management in ServiceNow** project automates the complete network request process using **ServiceNow Service Catalog**, **Flow Designer**, and **Approval Workflows**. Users can submit requests through a self-service portal, and the system automatically routes them for approval, creates records, updates request status, and sends email notifications. This solution reduces manual effort, speeds up request processing, improves transparency, and enhances overall IT service efficiency.

Current Problem	Proposed Solution	Expected Benefit
Network requests are handled manually through emails or paper forms.	Implement a centralized ServiceNow Service Catalog for submitting network service requests.	Simplifies request submission and reduces manual effort.
Approval process is slow and inconsistent.	Automate approval workflows using Flow Designer based on request type and organizational policies.	Faster and standardized approval process.
Users cannot track the status of their requests.	Provide real-time request tracking through the ServiceNow Service Portal .	Improved transparency and user satisfaction.
Manual assignment of requests causes delays.	Automatically assign tasks to the appropriate network support team.	Faster request processing and reduced workload.
Users are not informed about request updates.	Send automated email notifications at every stage of the request lifecycle.	Better communication and reduced follow-up inquiries.
High chances of human errors during request processing.	Validate request details automatically before processing.	Improved accuracy and fewer processing errors.
Difficulty in monitoring request performance and SLA compliance.	Generate reports and dashboards to monitor request status, SLA performance, and team productivity.	Better decision-making and SLA compliance.

Request records are	Store all request information in a	Easy access, better record management, and improved auditing.
Increasing number of requests creates administrative burden.	Automate repetitive tasks such as approvals, task creation, notifications, and status updates.	Reduced administrative workload and improved operational efficiency.
Limited scalability in manual systems.	Develop a scalable ServiceNow solution that supports future enhancements and additional network services.	Supports organizational growth and future requirements.
