

Ideation Phase

Empathize & Discover

Date	23 June 2026
Project Name	Automated Network Request Management
Maximum Marks	4 Marks

An **Empathy Map** is a visual tool used in **Design Thinking** to better understand the needs, thoughts, feelings, behaviors, and challenges of a user or customer. It helps developers and designers create solutions that are more user-centered by focusing on the user's perspective.

Empathy Map Canvas	Details for Automated Network Request Management
SAYS 	• "I need VPN/network access as soon as possible." • "I want to know the status of my request." • "Why is my request taking so long?"
THINKS 	• "The request process should be faster." • "I hope my request gets approved without delays." • "There should be one place to track my request."
DOES 	• Submits network service requests through the Service Catalog. • Waits for approvals from the concerned team.
FEELS 	• Frustrated due to long processing times. • Uncertain about request progress. • Concerned about missing work because of delayed network services
PAINS 	• Manual request handling • Approval delays • Lack of centralized request tracking. • Multiple email communications
GAINS 	• Faster request processing. • Automated approvals and notifications. • Real-time request tracking. • Reduced manual effort
